Permanent Hair Removal

## LAMPROBE

Telangiectasis

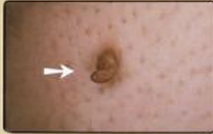

Fibroma on face

Fibroma on neck

Cholesterol Deposits

Skin Tag with stalk

Flat Skin Tag

Cholesterol Deposits

Large Fibroma

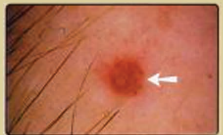

Acne Pimples

Clogged Pores

Raised Angioma

Cherry Angiomas

## How it works

The Lamprobe combines radio and high frequency technology to produce heat through its various treatment probes. This technology attracts fluids such as: Sebum, cholesterol or blood; drying them out to effectively reduce or remove the skin irregularity.

Treatments are very quick (some with few seconds), and some may not even touch the skin's surface. Small skin tags or blood spots disappear immediately and hyper-pigmented areas such as liver or "aged spots" take only a few seconds. Treatment time and costs vary depending on the type and size of the skin lesion being treated. Multiple treatments or longer treatment times may be required to effectively reduce the appearance, or remove the irregularity completely without obvious scarring.

There is minimal discomfort and healing time is short, from a day or two for skin tags to a few weeks for larger skin abnormalities such as fibromas, cholesterol deposits or milia.
